The restriction requirement is withdrawn.

Claims 1-25 are rejected under 35 U.S.C. 102(b) as being anticipated by Firestone et al. It discloses a method of targeting hypoxic tissues in the human or non-human animal body by administering to said body a bioreductive conjugate. There is no evidence that the species generated after release of the therapeutic agent is not capable of undergoing a self-alkylation. See compound 6 which would form a 3-(6-dimethylaminomethyl-3-amino-quinolin-8-yl)-acrylic acid on bioreduction. This moiety could react with a second molecule thereof (i.e. dimerization).

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-25 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention. The following terms are vague and indefinite: "non-cytotoxic bioreductive moiety", "therapeutic agent", "bioreduction", "species having an alkylating center and being capable of undergoing a self-alkylation reaction" and "non-cytotoxic residue of the bioreductive moiety".
